

MOZZIE MONITORS

Mozzie Month is a national citizen science initiative to monitor mosquitoes across Australia from February to March.

Citizen scientists used BG-GAT traps to capture mosquitoes and send photos to researchers at UniSA.

Most common species

Aedes notoscriptus

Culex quinquefasciatus

Toxorhynchites speciosus

Ae vigilax

Other species

Other invertebrates captured

Ants, wasps, midges, spiders.

Mozzie Monitors acknowledges our partners:

Government of Western Australia
Department of Health

- **Citizen scientists can capture mosquitoes and assist researchers from their backyards**
 - **remotely and at a low cost**
 - **Mosquitoes of ecological and medical importance**
- **No invasive species were detected in the first trial!**
